

Angular/React Test V.2 Survey App

Purpose of the App

Overview

The application is required to allow admins to create and subscribe surveys and to be filled by logged in users only.

Every survey can be filled one time only per user and will be stored in his storage.

User will be able to watch all the completed surveys and available to be filled.

Every completed survey will grant a coupon for the user

The surveys will be categorized with subjects. For example – survey about soccer will be categorized under "hobbies".

INSTRUCTIONS

Admin Dashboard specifications

- Will be able to create, edit, delete and subscribe/unsubscribe (drafts) surveys
- Can change user details – first and last name, email
- Can create new categories (empty as default)
- Set users to specific surveys per category
